Recommend a minimum of 2.5x fullness

Draperies higher than 106" require "railroad" process of stitching two fabric together, additional cost will incur for material.

Recommend deduct the profile height of the ceiling mount track from the total height

Ripple fold, need to know the fastener type button or buckle, and spacing

Rods longer than 95" maybe spliced if shipped by commercial carriers

If you want the window to show when drapery is open, allow for stacking space. A typical stack is 10% on each side (20% total of drapery width).

Body Memory is a heat treatment with the fabric for a long lasting folding curves

Cost calculation: (Drapery width in inches + liner length) x fullness /36 x (Pinch/Grommet/Triple pleats + body Memory)
